

TMC01 Drilling Jack Up Barge

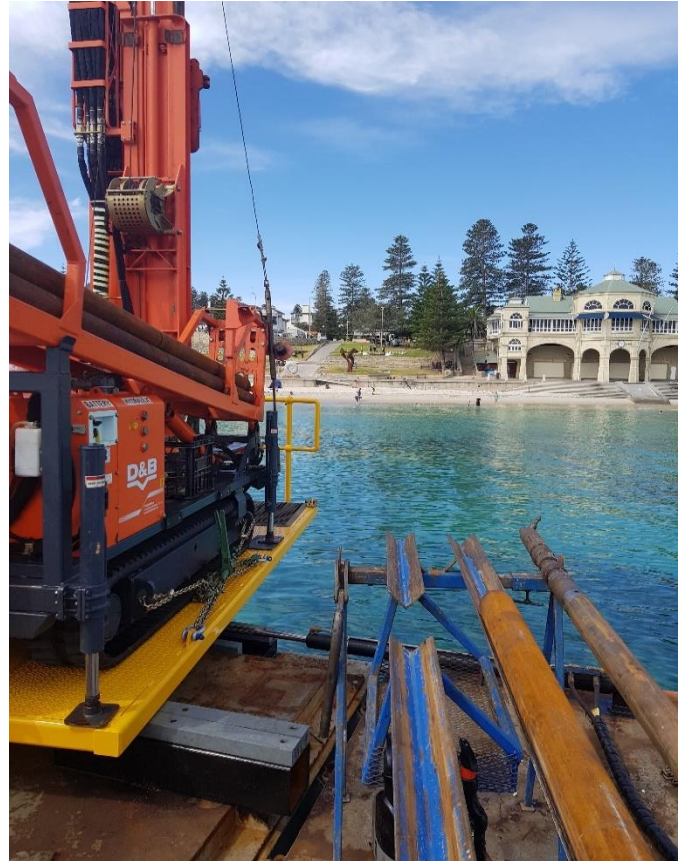

Soil Mechanics can provide Jack Up Barge configurations for all over water drilling projects.

Utilising TMC01 Jack up Barge and any of Soil Mechanics drilling rigs, we can provide Geotechnical/Environmental and Construction drilling options. Using an extendable platform we can position our rigs over difficult to reach locations.

Ideal for drilling inside and against structures or multiple holes within one barge location. The barge is perfect for all marine environments such as rivers, marinas, lakes, and nearshore/offshore areas. Our rigs can also be positioned over a moon pool to provide geotechnical drilling samples.

TMC01 Jack Up Barge is transportable by road using 2 standard semi-trailers and can be setup in just one day, making it very cost effective. Once in position the Jack Up Barge provides a safe stable drilling platform with ease of access.

DRILLING CAPABILITIES

Diamond Coring & Down Hole Hammer

Standard Penetration Testing

U-tube/Piston/Shear Vane Sampling

Rock Anchoring/Drilling/Grouting

Jack up Barge

Length 12m

Beam 7.2m

Survey 2D/2E
